

"OUR GOAL IS TO GIVE THE WORLD NICHE, COST-EFFECTIVE TECHNOLOGY SOLUTIONS"

ESDS, one of the world's leading data centre services and cloud solutions providers, has a US patent for its method of resource allotment and requirements. In other words, this is a patent for auto scalability. **Piyush Somani, founder, MD and CEO of ESDS Software Solutions Pvt Ltd**, talks about his company and the benefits of having a patent with the **Open Source For You** team.

Q How would you describe ESDS as a company?

A. ESDS is a leading managed cloud and data centre service provider in India with subsidiaries in the US and UK. It has been in business for more than a decade and has assisted thousands of organisations in transforming their presence online. ESDS takes pride in hosting more than two million websites and supporting a customer base of over 35,000 from every country connected to the Internet. The business of a significant number of these corporate entities is dependent on their Internet presence. ESDS has an Uptime Institute certified Tier 3 DC at Mumbai and a Tier 3 DC at Nashik, along with multiple leased facilities in the US, UK and other cities across India. The company's people believe in innovation, combined with great customer service.
