

Are You In Suspense?

Are you wondering what happened to your order or payment, even after a fortnight? But did you mention your name and address clearly while sending payment, and what the payment was for?

We get several payments every month without adequate instructions or even identity of the person sending the payment. As a result we are unable to take appropriate action on these, till we get a complaint - if at all.

At EFY, we want you to be our satisfied customer. So please do let us know in case your payment or instructions are not even acknowledged within a fortnight. We are not that lazy!

Technology Drives Us

embracing interfaces, the Web server layer, middleware and the back-end, supported by a product engineering culture. Participants of the

programme will spend at least 70 per cent of their time on project work. For this, NiIT has designed two different projects — Online Ticket Booking and Online Cab Booking.

“With the launch of MEAN stack we aim to create full-stack developers for start-ups and product engineering organisations,” said Prakash Menon, president of the global skills and careers group, NiIT.

On successful completion of the course, 100 per cent of the students will supposedly be offered placement assistance. Companies like LinkedIn, Netflix and Uber are already using the MEAN stack and will require relevant talent.

“We at NiIT, with over 35 years of experience and a keen understanding of the changing skills requirements of the industry, are committed to offering a series of industry-aligned training programmes in digital transformation. To cater to this need, we recently launched Java Enterprise Apps with Dev Ops, which has received an overwhelming response from the industry and, in continuation to this, we now introduce the MEAN stack programme,” Menon added.

Admissions for the new MEAN stack course began at NiIT centres on June 24, this year.

In addition to the new Web app development programme, NiIT offers various digital skills development courses like Java enterprise engineering with DevOps, Big Data and data sciences, cyber security, database systems, the Internet of Things (IoT), artificial intelligence, machine learning and virtual reality. These courses are targeted at graduates and graduating students in science, technology, engineering and mathematics.

Microsoft releases .NET Core 1.0 to go beyond Windows

As part of its ongoing efforts to support the open source community, Microsoft has released .NET Core 1.0. The new .NET runtime platform has been opened to the community and is available as a cross-platform offering across Linux and

Mac OS X, in addition to the company's proprietary Windows operating system.

Microsoft announced the first release of .NET Core back in 2014, but the platform took more than a year to take shape. The Redmond giant has also revealed ASP.NET Core 1.0 as an open source, modular version of the original ASP.NET framework.

Additionally, Microsoft has expanded its existing partnership with Red Hat to debut its .NET Core on Red Hat Enterprise Linux and OpenShift. “Today, we're pleased to announce that .NET Core is now not only available on Red Hat
