

“Educating the marketplace about deploying data encryption is one of our fundamental charters”

Why is data encryption gaining importance? How cost-effective are the solutions emerging for enterprises and startups? **Rahul Kumar**, country head of WinMagic, shared his views on these topics with **Jagmeet Singh** of *OSFY*. Here are excerpts from the conversation.

Q Data loss is indeed becoming a business problem. What are the solutions WinMagic offers to save crucial data?

Essentially, data losses result in big problems because all companies have some important data. Companies are doing a lot to try and protect their data but what ends up happening is that they leave behind a gaping hole in the entire system when they don't consider one-key encryption. What happens if you lose your laptop today? A large amount of your data will be gone, and you don't know just how difficult it is to acquire the same data back again. Nor do you know who has your information now. There is only one solution to protect your data in such cases. It is to encrypt the device with solutions such as WinMagic. Data encryption solutions limit the instances of data loss and offer a strict security layer on top of users' personal data.

Rahul Kumar,
