Eucalyptus vs other IaaS private clouds

There are many IaaS offerings available in the market like OpenStack, CloudStack, Eucalyptus and OpenNebula, all of which are being used as both public and private IaaS offerings.

Of all the IaaS offerings, OpenStack still remains the most popular, active and biggest open source cloud computing project, yet enthusiasm for Eucalyptus, CloudStack and OpenNebula remains solid. Based on business critical requirements, cloud service providers and administrators can choose specific IaaS offerings.
