

Figure 1: Nagios

The latest version available is NMIS 8.5.10G, which was launched in September 2015.

Its features are:

- Performance management and real-time monitoring
- Operation tools and distributed monitoring
- Faults and events monitoring, and real-time notification
- Business rules engine
- Scalability and management reporting
- UI designed to provide specialised views, to avoid missing the wood for the trees in large environments
- Extremely efficient monitoring system

NetXMS

NetXMS is an open source enterprise graded multi-platform management and monitoring system, which provides comprehensive monitoring of event management, performance, alerting, reporting and graphing for all layers of IT infrastructure—from network devices to the business application layer.

Architecture: NetXMS architecture is three tiered.

1. Information is collected by monitoring agents — either high-performance agents or SNMP agents.
2. Information is delivered to the monitoring server for processing and storing.
3. Information is displayed via a rich client application or Web interface.

The latest version is 2.0.4, which was released in June 2016.

features are:

- Unified platform for management and monitoring of entire

IT infrastructure.

- Designed for maximum performance and scalability.
- Distributed network monitoring and automated network discovery.
- Business impact analysis tools; quick deployment with minimal efforts.
- Easy and simple integration with a wide range of products.
- Flexible and easy to use.
