

Horizontal arrangements: These are special components, which keep all child components aligned within themselves, horizontally.

Notifier: This is used to display some instructions or gives you control over your existing components. You will be able to see its functionality in more detail as we will be implementing it in our app.

List picker: The list picker component is one of the basic components from the App Inventor repository. Using this you can pick a definite item from a list of items and once selected, it will be treated as your choice for further actions.

Tiny DB: As you already know, this is the application-specific database that the Android system provides. This is where all your user credentials like

Figure 1: Designer screen

Figure 2: How the application looks

passwords, high scores, subscriptions, etc, are maintained.

In the table below are the components that we require for this application. We will drag them on to the designer from the left hand side palette.

1. Drag and drop the components mentioned in the table, to the viewer.
2. Visible components can be seen by you while the non-visible components will be located beneath the viewer under the tag 'Non-visible'.
3. We have placed a label so as to put the name of the application.
4. All buttons need to be put within the 'Horizontal arrangement' so as to keep them aligned horizontally.
5. If you have dragged and placed everything, the layout will look like what's shown in Figure 1.
6. Make the necessary property changes like we did while changing the text property for the label and button components.
7. Renaming the components helps to identify them in the block editor.
8. Your graphical user interface is

Figure 3: A view of the components

Component name	Purpose	Location
Label	To display a label	Palette-->User Interface-->Label
Button	To trigger events	Palette-->User Interface-->Button
Horizontal arrangement	To arrange the child components	Palette-->Layout-->Horizontal Arrangement
Notifier	To display on-screen information	Palette-->User Interface-->Notifier
Tiny DB	To store data persistently	Palette-->Storage-->Tiny DB
List picker	Enable picking an item from the list	Palette-->User Interface-->List Picker
