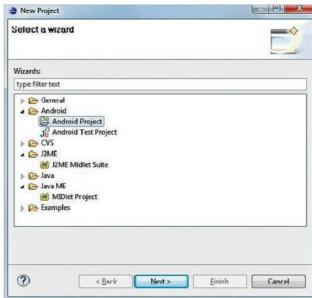

Figure 5: Setup Wizard - Step 1

Preferences are for all platforms if you haven't specified them for a single platform. To specify a preference for a single platform, you can place the preference tag inside a platform tag.

```
<platform name="ios">
  <preference name="orientation" value="landscape" />
</platform>
<platform name="android">
```

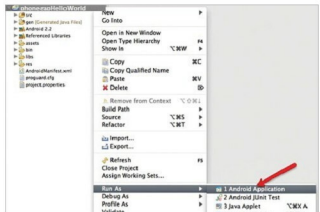

Figure 7: Launching PhoneGap application in the Android Emulator

```
<preference name="orientation" value="portrait" />
</platform>
```

Icons and splashes

```
<icon>
```

Can be zero or more of icon elements. If not specified, then the PhoneGap logo will be used as the application's icon.

src: (required) path of the image file

Width: (optional) width in pixels

Height: (optional) height in pixels

Icons and splashes are platform dependent. Shown below are two ways to specify an icon or splash for a particular platform.

1) By specifying a platform attribute:
