

Once you run the command, you will see the screen shown in Figure 3.

This will create a complete workspace for your PhoneGap Android app, as shown in Figure 4.

Setting up your project in Eclipse

Once you have created the above workspace, you can open it in Eclipse. Now create a new Android project, as shown in Figure 5,

Next, select 'Create project from existing source' and give the project a name, as shown in Figure 6.

Add the external library (*phonegap.jar*) in the *libs* folder of your workspace.

To add the external library, right-click on the project *Build Path* → *Add external archive* → *phonegap.jar* in the *libs* folder.

There will already be a file called *phonegap.js* in the *assets/www* folder of the workspace. In the same folder, create a file called *index.html* for your content and add the following code:

```
<!DOCTYPE HTML>
<html>
  <head>
    <meta name="viewport" content="width=320; user-scalable=no" />
    <meta http-equiv="Content-type" content="text/html; charset=utf-8">
    <title>PhoneGap</title>
    <script type="text/javascript" charset="utf-8" src="phonegap.js"></script>
    <script type="text/javascript" charset="utf-8">
      var sayHello = function() {
        var name = document.getElementById("Name").value;
        navigator.notification.alert("Hello
        : " + name);
      }
    </script>
```

```
</head>
<body onload="init();" id="ibody" >
  <div id="txt">
    <input type="text" name="Name" id="Name" />
  </div>
  <div id="btnhello">
    <a href="#" class="btn" onclick="sayHello();">Go</a>
  </div>
</body>
</html>
```

There is a textbox in which you can enter the name and there is a button called 'Go'. Once you click the button, it will show the output of 'Hello' and the name you have entered in the textbox in an alert box.

To launch your PhoneGap application in the Android emulator, right-click the project root, and select *Run As* → *Android Application* (see Figure 7).

Once you run the project, you can see the screen shown in Figure 8 on your emulator.

When you click on the *Go* button, it will show the alert box, as shown in Figure 9.

PhoneGap's native APIs are listed in Table 1.
