
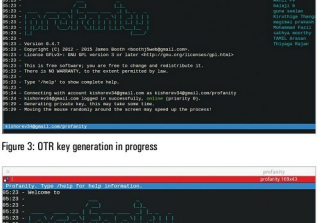

Figure 3: OTR key generation in progress

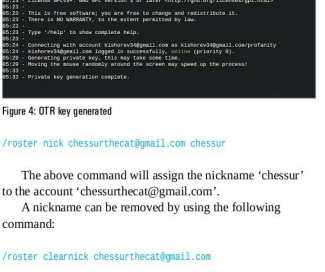

Figure 4: OTR key generated

```
/roster nick chessurthecat@gmail.com chessur
```

The above command will assign the nickname 'chessur' to the account 'chessurthecat@gmail.com'.

A nickname can be removed by using the following command:

```
/roster clearnick chessurthecat@gmail.com
```

Groups: Profanity allows you to keep contacts in groups.

- To view all the groups in your account, issue the */group* command.
- To view the contacts that belong to a particular group, use */group show group_name*
- To add a particular contact in a group, use */group add group_name contact_name*
- To remove a contact from a group, use */group remove group_name contact_name*

Chatting with OTR encryption

OTR (off the record) encryption is one of the salient features of Profanity. To start chatting with OTR, you must first generate your private key. To do that, type the following command:

```
/otr gen
```

You will see that your private key is being generated.

Figure 5: 'OTR Session Untrusted'

This should take some time, but moving the mouse pointer randomly on the screen will speed up the key-generating process.

Once your key is generated, you can start your OTR session with the other user, who should have enabled OTR on the messenger also to achieve a successful trusted OTR session between two users.

```
/otr start user@gmail.com
```

The above command will attempt to establish an OTR session with the other user, but the set-up isn't complete as we have not authenticated the other user's identity. Hence, the OTR session will be shown as 'untrusted' in the title bar.

To authenticate other users, Profanity uses three types of authentication methods:

1. Question and answer
2. Shared secret
3. Fingerprint

In this article, we will use the 'Question and Answer' challenge method for the other user. If he/she provides the expected answer, then the identity is confirmed.

The following command will provide a question and answer challenge for that particular user:

```
/otr question "Who is the patron saint of desperate cases?"
St Jude
```

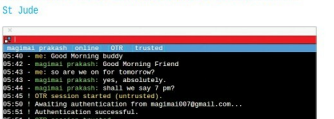

Figure 6: 'OTR Session Trusted'

Once your friend answers the question correctly, the 'untrusted' indicator will be changed to 'trusted' and also a message 'OTR Session Trusted' will be displayed. END
