```

Figure 3: Live tweets fetched from Twitter in JSON format

Figure 4: OpenRefine tool for processing of messy datasets

```

list.write(u.screen_name + ' \n')
except:
    time.sleep(15*60)
    u = next(currentuser)
    list.write(u.screen_name + ' \n')
list.close()

```

The following script of Python can be used to parse the JSON to CSV format:

```

JSON - CSV Parser
import fileinput
import json
import csv
import sys
l = []
for currentline in fileinput.input():
    l.append(currentline)
currentjson = json.loads(''.join(l))
keys = {}
for i in currentjson:
    for k in i.keys():
        keys[k] = 1
mycsv = csv.DictWriter(sys.stdout, fieldnames=keys.keys(),
                      quoting=csv.QUOTE_MINIMAL)

```

```

mycsv.writerow()
for row in currentjson:
    mycsv.writerow(row)

```

Fetching data from Twitter using PHP code

For fetching live tweets using PHP code, the API *TwitterAPIExchange* is required. After including this API in this PHP code, the script will directly interact with the Twitter servers and live streaming data.

```

<?php
error_reporting(0);
define('CURRENTDBHOST','localhost');
define('CURRENTDBUSER','root');
define('CURRENTCURRENTDBPASSWORD','');
define('CURRENTDBPASSWORD','');
define('CURRENTTWEETTABLE','Twitter');
require_once('TwitterAPIExchange.php');
$settings = array(
    'oauth_my_app_accesstoken' =>
        "XXXXXXXXXXXXXXXXXXXX",
    'oauth_my_app_accesstoken_secret' =>
        "XXXXXXXXXXXXXXXXXXXX",
    'my_app_consumerkey' => "XXXXXXXXXXXXXXXXXXXX",
    'my_app_consumersecret' => "XXXXXXXXXXXXXXXXXXXX"
);
$url = "https://api.twitter.com/1.1/statuses/user_timeline.json";
$myRequestMethod = "GET";
$setfield = '?screen_name=gauravkumarin&count=20';
$twitter = new TwitterAPIExchange($settings);
$sttring = json_decode($twitter->setGetfield($setfield)->buildAuth($url,$requestMethod)->performRequest(),$assoc = TRUE);
if($sttring["errors"][0]["message"] != "")
{
    echo "<h3>Sorry, there was a problem.</h3><p>Twitter returned the following error message:<p><p><em>".String($sttring["errors"][0]["message"])."</em></p></p>";
    foreach($sttring as $item)
    {
        echo "Tweeted by: ". $item['currentuser']
        ['name'].<br />";
        echo "Screen name: ". $item['currentuser']
        ['screen_name'].<br />";
        echo "Tweet: ". $item['text'].<br />";
        echo "Time and Date of Tweet: ". $item['timestamp'].<br />";
    }
}

```
