view the feeds. A screenshot is shown in Figure 3.

The entire contents of the `elfeed-start.el` configuration file are shown below:

```
(require 'package) ;; You might already have this line
(add-to-list 'package-archives
  '("melpa" . "https://melpa.org/packages/"))

(when (< emacs-major-version 24)
  ;; For important compatibility libraries like cl-lib
  (add-to-list 'package-archives ("gnu" . "http://elpa.gnu.
org/packages/")))
(package-initialize) ;; You might already have this line

(global-set-key (kbd "C-x w") 'elfeed)

(defun elfeed-search-format-date (date)
  (format-time-string "%Y-%m-%d %H:%M" (seconds-to-time
```

```
date)))

(setq elfeed-feeds
  '(("http://www.shakthimaan.com/news.
xml" people)
    ("http://arduino.cc/blog/feed/"
 projects)
    ("http://planet-india.randomink.org/
rss10.xml" people planet)
  ))
```

Gnus configuration

Gnus is an Emacs package for reading e-mail and Usenet news. The `nrrss` backend supports reading RSS feeds. Gnus is available by default in GNU Emacs. After launching Emacs using `emacs -Q` in the terminal, you can start Gnus using `M-x gnus`. To add a new RSS entry, you can use 'G R'. It will prompt you with the message 'URL to Search for RSS:'. You can then provide the feed — for example, `http://www.shakthimaan.com/news.xml`. It will try to connect to the server and will provide you the message 'Contacting host: www.shakthimaan.com:80'. After a successful connect, it will prompt you for the title, 'Title: Shakthimaan's blog'. You can simply hit `Enter`. You will then be prompted for a description, 'Description: RSS feed for Shakthimaan's blog.' You can hit `Enter` again to proceed. Now, the blog entry has been added to Gnus. In this fashion, you

can add the other blog entries too. A screenshot of the main Gnus Group buffer is shown in Figure 4.

Usage

You can press 'g' to refresh the buffer and ask Gnus to check for the latest blog entries. Using the 'Enter' key will open the feed, and the list of blogs for a feed. A screenshot is shown in Figure 5.

You can press 'Enter' on a blog entry, and it will open the contents in a new buffer. It will then be marked as read, indicated by 'R'. A screenshot of a blog entry rendering text and an image is shown in Figure 6.

You can press 'q' to quit from any level inside Gnus. You are encouraged to read the Gnus tutorial (<http://www.emacswiki.org/emacs/GnusTutorial>) and manual (<http://www.gnus.org/manual/big-gnus.html>) to learn more, and to customise it for your needs.
