

Ten Open Source Web Development Tools

The main intention of this article is to make people aware about the latest open source tools that are popular today. The article will interest Web developers who use open source tools.

Of the thousands of open source tools, we've tried to list the best among them. It's not been easy to arrive at this list, especially because different people have different, personal favourites.

Node.js

Node.js is a JavaScript runtime built on Google Chrome's V8 JavaScript engine. It's an open source cross-platform runtime environment for developing server-side Web applications. Node.js uses an event-driven, non-blocking I/O model, which makes it faster and more efficient. Ryan Dahl is the original author of Node.js. Its initial release was on May 27, 2009.

AngularJS

AngularJS is a JavaScript framework for dynamic Web apps. It's preferable for one-page Web applications. AngularJS supports filters and data-binding with HTML attributes. It

has support for forms, form validation and DOM handling. It was originally created by Google and open sourced under the MIT licences. Developed by Brat Tech LLC, Google and the community, it's initial release was in 2009.
