

“Microsoft's relationship with Red Hat will not affect SUSE.”

Microsoft's latest relationship status with Red Hat is the talk of the tech town. While some people are wondering why Red Hat went ahead to join hands with its long-term rival Microsoft, others are keen to learn how this new-found relationship will change the equations of the game. SUSE has been enjoying a relationship with Microsoft for a long time now. **Diksha P. Gupta** from *Open Source For You* magazine caught up with **Rajarshi Bhattacharyya**, country head, *SUSE India*, to understand how the company will be affected with Red Hat's new alignment. They also talked about the company's latest PaaS focus, and a lot more. Read on...

Q SUSE has recently announced its entry into the Platform as a Service (PaaS) landscape. How is it going to impact SUSE's overall business as well as its position in the Indian geography?

One of the biggest highlights of SUSECon 2015's keynote was SUSE's entry into the Platform as a Service (PaaS) landscape; the company is joining the Cloud Foundry Foundation.

SUSE's PaaS offerings were available through partners such as WSO2 and others. While we still have those offerings from our partners, we felt the need to be a part of Cloud Foundry and stay engaged because of the presence of partners such as SAP and IBM. SUSE is collaborating with SAP on the Cloud Foundry Foundation BOSH OpenStack Cloud Provider

Interface (CPI) project. This will enable Cloud Foundry users to easily run applications of their choice on public or private clouds. The enterprise-grade solutions for customers will increase their opportunities for business success.

The CPI project is led by SAP and its goal is to improve the ease with which Cloud Foundry communicates with underlying OpenStack infrastructure, whether the cloud is public or private. It will help simplify application testing and deployment for a wide range of cloud users.

In this context, we see that many organisations (enterprises and government) in India use SAP, and it will help them to adopt the cloud in a faster, more reliable and secure way. This will lead to faster adoption of SUSE's
