

OSI 2015

WHERE THE INDUSTRY MET THE COMMUNITY

The twelfth edition of Open Source India (OSI) has concluded, taking the philosophy and spirit of open source to an all new level... or should we say, to an all new 'business' level. Yes, OSI is now just not an interaction and knowledge-sharing platform. Over the years, the show has evolved to become a strong business platform, where the industry meets the community.

Open Source India 2015 was organised on November 19-20, 2015, at the NIMHANS Convention Centre, Bengaluru. Despite the incessant, unseasonal rains across the city and in adjoining areas, OSI saw a decent turnout. About 1400 people made it to the event over the two days. Karthik Padmanabhan, executive - cloud ecosystem and developers, IBM Asia Pacific, shares, "OSI 2015 was a good show. We were looking to connect with developers of all levels and we got that opportunity during the show."

A complete show...

Open Source India 2015 saw a mix of IT decision-makers and developers in the audience. Lux Rao, CTO, HP India, has been a key speaker at Open Source India for the past four editions. He says, "I have seen this show growing and evolving. The quality of sessions and speakers has improved manifold over the years. From just being a technology show, OSI has now evolved to be a technology-cum-business event. This year, we witnessed a lot of CIOs/CTOs coming to the show, and they talked about the business perspective of technology as well. I think that makes OSI a complete show."

OSI 2015 focused on taking the concept of enabling the industry to meet the community a notch higher

than in previous years. Speaking about the show, Rahul Chopra, director, editorial, *Open Source For You* magazine, says, "This edition of OSI saw a good turnout of the CIO community, both as speakers and as audience members. We saw IT decision-makers from some of the biggest companies like GloballLogic, RedBus, Flipkart and Kotak Bank, share their success stories of open source technology deployments. We also saw a huge turnout of IT decision-makers in the audience, who were present at the show to understand how their peers view the latest developments in technology. Going by the adage that seeing is believing, we thought that propagating open source technologies by showing some use cases would make it easier for the audience to believe that the technology is actually being adopted at various levels. This development was much appreciated by the audience and has been a crowd-puller for the show this year."

Hands-on dabbling with technology

Open Source India is now a platform where technology is not only discussed, but practised too. OSI 2015 saw 16 hands-on workshops being conducted in a span of two days. It should be noted that most of the workshops were sold out before the show began. Ganesh Samarthyam, corporate trainer, consultant and author, who has been conducting workshops at Open Source India for two years now, witnessed a huge turnout at his workshop titled, 'Software Architecture: Principles, Patterns, and Practices'. Samarthyam says, "I
