

have attended previous editions of OSI as well, and I can say that the show is growing with every passing year. About 65-70 people attended my workshop, and they ranged from fresh engineers to experienced professionals. At Open Source India, the audience mix is very interesting. While on the one hand, we get to meet the fresh blood, on the other, the experienced guys bring in the balance to the show. Also, I would like to mention that the show was very well organised."

Jacob Singh, country head, Acquia, India, who has been a presenter at the show for several editions in the past, appreciated the way OSI 2015 was organised. He says, "This edition's show witnessed a quality turnout and the workshop I conducted was completely packed. The show was better organised compared to the previous editions. I have been at several international shows and I can vouch that OSI is at par with them. The only thing I feel needs improvement is that there should be a 15-minute break between two sessions. This will give a breather to the audience and will be advantageous for the exhibitors as well."

The latest in technology

How is the content of OSI planned, you may ask. Well, there's a panel of experts in technology involved in the process. The industry and community experts brainstorm to zero in on what should be the direction of the show from the content perspective.

There's a huge network of tech professionals associated with *Open Source For You* magazine, who are approached and encouraged to speak about the latest and the greatest in technologies; they put across their presentations through a 'Call for papers' exercise.

Rahul Chopra emphasises, "While our team works extensively to bring in the industry experts for the show, we make equal attempts to reach out to the community and encourage them to participate in the show. This year, we received hundreds of requests from community experts who wanted to speak. Our expert committee then screened their papers and decided on the speakers, keeping in mind the direction of the content decided upon earlier. We strive to make OSI a platform where people can get a glimpse of successful as well as upcoming technological trends for the next year. We want to keep the futuristic approach and, I feel, we succeeded in that too. The IoT track, for instance, was added this year. IoT is one domain which is creating a buzz and open source is poised to rule in it. We got a great response for the IoT track from the audience as well as the speakers."

OSI 2015 signed off on a positive note, keeping the spirit of open source alive and with the promise to come back in a bigger and better avatar.

Thank You Advisors & Speakers

12th Edition

OPEN
SOURCE INDIA

19 - 20
November
2015
