Phar

```

Figure 1: *gd* in the list of installed libraries

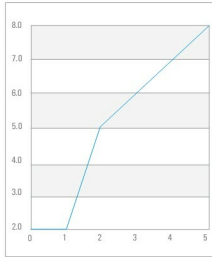

Figure 2: Line graph

```
$data = array(2, 2, 5, 6, 7, 8);
```

Now create the plot:

```
$plot = new LinePlot($data);
```

Add the plot to the graph using the *Add* function:

```
$graph->Add($plot);
```

Finally, display the graph using the *Stroke* function:

```
$graph->Stroke();
```

The graph for the above code is shown in Figure 2.

Creating a bar graph

In order to create a bar graph, include the code from *jpgraph.php* as well as from *jpgraph_bar.php*. *jpgraph_line.php* is not required here.

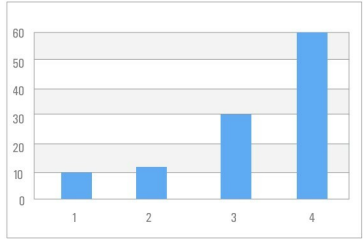

Figure 3: Bar graph

```

require_once('jpgraph/src/jpgraph.php');
require_once('jpgraph/src/jpgraph_bar.php');
//create the graph
$graph = new Graph(350,220); //set the width and the height
$graph->SetScale("textlin"); //set the scale of the graph
$data=array(10,12,30,60); //prepare the data
// Create the bar plots and add it to the graph
$barplot = new BarPlot($data);
$graph->Add($barplot);
$graph->Stroke(); //display the graph

```

The graph for the above code is shown in Figure 3.

You may use the package to create various other types of graphs as well. Go ahead and explore JpGraph!
