

*Python3 Compatible version:*

```
$ sudo apt-get install python3-kivy
```

The pre-installed kivy examples can be installed using the following instruction on the command line:

```
$ sudo apt-get install kivy-examples
```

## Installation on Android

Being a Python framework, Kivy can be installed on any Android device in the same way as on a classical desktop machine and there's nothing special to be done. Kivy applications can be compiled to standard Android based APKs like a Java app on the device.

## Installation on Raspberry Pi

Kivy can be installed on Raspberry Pi manually. Alternatively, after downloading, KivyPie can be booted on the Raspberry Pi itself.

## Manual installation on Raspbian

To install the dependencies, use the following code:

```
$ sudo apt-get update
$ sudo apt-get install libssl-dev
libssl2-image-dev libssl2-mixer-dev
libssl2-ttf-dev \
gststreamer1.0-plugins-
(bad,base,good,ugly) \
python-setuptools libgststreamer1.0-dev git-core \
pkg-config libgl1-mesa-dev libgles2-mesa-dev \
gststreamer1.0-{omx,alsa} python-dev cython
```

Install Kivy globally on your system, as follows:

```
$ sudo pip install git+https://github.com/kivy/kivy.git@master
```

Or build and use Kivy inplace (best for development), using the following code:

```
$ git clone https://github.com/kivy/kivy
$ cd kivy
$ make
$ echo "export MY-PYTHON-PATH=$(pwd):\$ MY-PYTHON-PATH" >>
~/.profile
```

Figure 1: Official page of Kivy

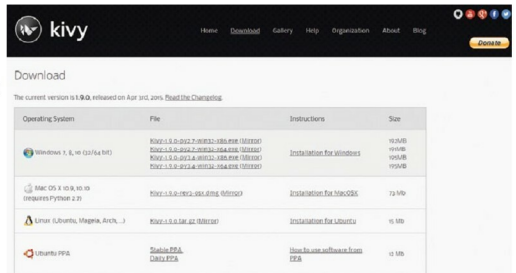

Figure 2: Download page of Kivy

```
source ~/.profile
```

## Configuring Kivy

*Config.ini* is the configuration file of Kivy, which is in the standard INI format. The path of the configuration file *config.ini* is managed by the environment variable *KIVY\_HOME*.

On the desktop, this defaults to:

```
<User-Home-Directory>/kivy/config.ini
```

If the user name is 'MyUser', the file location will be:

**Windows:** *C:\Users\MyUser\kivy\config.ini*

**OS X:** */Users/MyUser/.kivy/config.ini*

**Linux:** */home/MyUser/.kivy/config.ini*

**Android:** *<My-Android-App-Path>/kivy/config.ini*

If the app name is 'my.kivy.app', the file will be in the following location:

```
/data/data/my.kivy.app/files/kivy/config.ini
```

**iOS:** *<User-Home-Directory>/Documents/kivy/config.ini*
