

Building Mobility Solutions for Enterprises

Mobility solutions are viewed as a means to efficiency, productivity, real-time information access, and an effective communication and collaboration tool by enterprises. However, management and security are critical considerations for enterprises, from the enterprise data protection perspective. This article introduces transformative enterprise mobility solutions that can be built for optimally mobilising business processes while ensuring that the typical challenges faced by enterprises today in leveraging mobility are resolved.

The global BYOD market is likely to grow to about US\$ 266 billion by 2019, as forecast by *MarketsandMarkets*. With this, security and compliance are a priority for enterprise decision-makers.

According to IDC, the US mobile worker population will grow at a steady rate over the next five years, increasing to nearly 72 per cent of the total US workforce. Further, as per a *StrategyAnalytics* report, globally, the mobile workforce is set to increase to about 42 per cent of the total workforce by 2018.

Definitely, IT consumerisation is one of the key driving forces everywhere. Other drivers include the increasing affordability of mobile devices, combined with the growing acceptance of BYOD programmes. However, the most tactical challenge still remains to ensure a secure and policy-compliant mobile ecosystem.

Mobility is not just about the creation of appealing mobile applications – it's about changing the way businesses run. In this article, I will share with you the key challenges in creating an enterprise-grade mobile solution and how to overcome them.

Transformative enterprise mobile solutions

a transformative enterprise mobile solution is essentially an end-to-end solution built to optimally mobilise business processes. It must integrate seamlessly with enterprise backend systems. It must support mobile-specific features and, most importantly, it must comply with relevant IT security policies.

It involves making the solution secure from an enterprise data privacy perspective and enhancing productivity for users. It helps in fostering life cycle management for apps and devices, and also integrates well with the current enterprise ecosystem. Thereby, it helps an enterprise solution suite evolve with time as per the needs of the enterprise, its users and market demands.

Let us now look at the key challenges involved in building such transformative enterprise mobile solutions.

The key challenges

One of the central challenges is that of ensuring data security. Most of the enterprise data accessed from mobile devices makes its way through untrusted networks and often
