

Figure 1: App Inventor Google search result

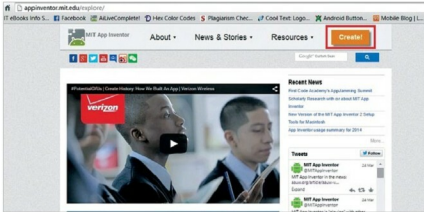

Figure 2: App Inventor website

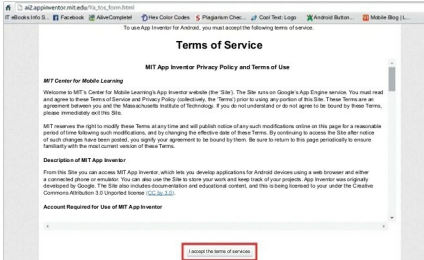

Figure 4: App Inventor terms of use

1. A valid Google account, as you need to log in using your credentials.
2. A working Internet connection, as you need to log in to the cloud-based browser that's

- compatible with App Inventor; hence, a working Internet connection is a must.
3. App Inventor is compatible with Google Chrome 29+, Safari 5+ and Firefox 23+.

Figure 3: Logging in to App Inventor

4. An Android phone to test the final, developed application.

Beginning with App Inventor

Hope you have everything to begin your journey of Android app development with App Inventor. Follow the steps below to make your first project.

1. Open your Google Chrome/Safari/Firefox browser and open the Google home page.
2. Using the search box, search for App Inventor.
3. Choose the very first link. It will redirect you to the App Inventor project's main page. This page contains all the resources and tutorials related to App Inventor. We will explore it later. For now, click on the **Create** button on the top right corner.
4. The next page will ask for your Google account credentials. Enter your user name and password that you use for your Gmail application.
5. Click on the **Sign in** button, and you will successfully reach the App Inventor app development page. If the page asks you to confirm your approval of certain usage or policy terms, agree with them all. It is all safe and is mandatory if you want to move ahead.
6. If all is done correctly, you should see a page similar to what's shown in Figure 5.
7. Congratulations! You have successfully set up all the necessary things and can now develop your first application.
