

Figure 12: Block editor blocks

- The second block is to trigger the events when someone touches the screen. We have added a button whose image property is the image you are seeing on your screen. As soon as it feels the touch, it will play the sound and vibrate too.

Now you are done with the block editor. Next, let's move to download and install the app on your phone to check how it is working.

### Packaging and testing

To test the app, you need to get it on your phone. First, you have to download the application to your computer and then move it to your phone via Bluetooth or USB cable. I'll tell you how to download it.

On the top row, click on the *Build* button. It will show you

the options to download the APK to your computer.

The progress of the download can be viewed and after being successfully completed, the application will be placed in the download folder of your directory or the preferred location you have set for your downloading.

Now, you need to get this APK file to your mobile phone, either via Bluetooth or via USB cable. Once you have placed the APK file on your SD card, you need to install it. Follow the on-screen instructions to install it. You might get some notification or warning saying

'Install from untrusted source'. Allow this from the settings and after a successful installation, you will see the icon of your application in the menu of your mobile. Here, you will see the default icon that can be changed, and we will tell you how to do so as we move ahead in this course.

I hope your application is working exactly as per the requirements you have set. Now, depending upon your usage requirements you can change various things like the image, sound and behaviour too.

**A note to readers:** I would like to know more about your interests and ideas on creating Android apps. If you have any specific ideas on which you want me to write, do write back to me via email. I will surely try to help you convert your idea into a working application.
