

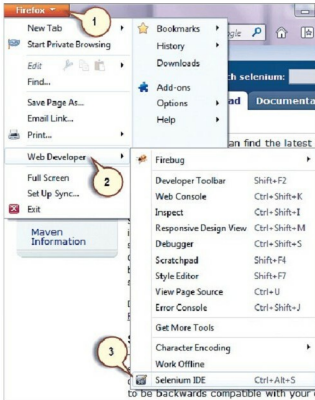

Figure 1: Selenium IDE launching menu

Downloading and installing Firebug

Installing Firebug is as simple as downloading and installing the Selenium IDE.

1. Open Mozilla Firefox and directly navigate to the URL <https://getfirebug.com/downloads/>.
2. Click on the download hyperlink.
3. On the next screen, click on 'Add to Firefox' button.
4. This will begin the download and you will be notified once the download is finished.
5. Once the download is completed, you will see the *Install* option. Click on the *Install* button to begin with the installation. Follow the on-screen instructions, if any.
6. Once the installation is finished, you will see a notification saying: 'Firebug has been installed successfully'. After installing Firebug, you need not restart Firefox. Once Firebug is successfully installed, you will see its

icon on the top right corner of the screen.

We have now installed the Selenium IDE and Firebug. The greatest utility of Selenium IDE is that it supports *Record* and *Play* like the very famous HP UFT/QTP. Let's hit the *Record* button and start performing the various operations on the screen, which will be recorded by the Selenium IDE and on playback, it will repeat those steps.

We will continue our journey of mastering Selenium beginning with the very first script in the Selenium IDE, which will be 'record and play in action'. We will be using the following to make our first script in the Selenium IDE:

1. A working Internet connection.
2. Mozilla Firefox with the Selenium IDE and Firebug already downloaded and installed.
3. Mercury Tours website (<http://newtours.demoaut.com/>) as the application under test.

Steps for the first script

The steps are listed below:

1. Open Mozilla Firefox.
2. Launch the Selenium IDE by going to *Firefox menu button > Web Developer > Selenium IDE*.
3. Once the Selenium IDE is launched, set the base URL as <http://newtours.demoaut.com/>.

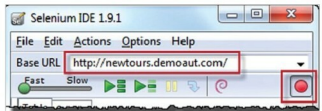

Figure 4: Selenium IDE

4. Press the *Record* button within the Selenium IDE. This starts the record mode and everything we do further in Mozilla will be added as a command to the Selenium IDE.
5. In the Firefox URL bar, put the address as <http://newtours.demoaut.com/> and press Enter.
6. It will open up the Mercury Tours website, which will look similar to what's shown in Figure 5.
7. Right-click anywhere on the page to select 'Show Available Commands'.
8. Further, select 'Assert title exact:' with which we will verify the title of the Web page. In our case, it should be 'Welcome: Mercury Tours' always.
9. In the 'User Name' field, type an invalid user name, like 'invalidUN'.
10. In the 'Password' box, type an invalid password, 'invalidPW'.
