

Command	Number of parameters	Description
open	0 - 2	Opens a page using a URL
click/clickAndWait	1	Clicks on a specified element
type/typeKeys	2	Types a sequence of characters
verifyTitle/assertTitle	1	Compares the actual page title with an expected value
verifyTextPresent	1	Checks if a certain text is found within the page
verifyElementPresent	1	Checks the presence of a certain element
verifyTable	2	Compares the contents of a table with expected values
waitForPageToLoad	1	Pauses execution until the page is loaded completely
waitForElementPresent	1	Pauses execution until the specified element becomes present

A brief about Selenium commands

Selenium commands are the statements which tell Selenium what to do at each step and are also referred to as Selenese. These commands are single line statements which might or might not require a parameter. Basically, selenium commands can be divided into three categories (see Table 1):

- Action: Action commands are those that manipulate the state of the application.
- Accessor: The Accessor command checks the particular state and saves it into a variable for later use.
- Assertion: Assertion commands are for verification or validation purposes.

The table above lists a few common Selenium commands. Once you know the commands, you can manually make the script. This is only an introduction to the Selenium IDE, prior to you moving on to mastering the Selenium Test Suite. Practice it till you perfect it.
