}

@Override protected double computePrefHeight(double
width) {
    return 600;
}
}

```

Cross-platform mobile applications using JavaFX

A lot is happening in the mobile world, and many more people will be using mobile devices in the near future to access the Internet. Companies are spending huge amounts of money on developing mobile applications to tap this emerging market. The market share of mobile/tablet OSs is dominated by Android with 60-65 per cent, iOS with 30-35 per cent, with the rest divided between Windows, Blackberry, Java ME, etc. Any company developing a mobile application has to target iOS and Android for deep market penetration. As of now, native applications are more popular on mobiles. Most of the Android and iOS native applications are widely developed using standard SDKs. There are a few cross-platform application development frameworks like jQuery Mobile, PhoneGap, etc. However, there is a gap between the demand for developing cross-platform, cross-device applications, and the mobile application development platforms that can do so. JavaFX is a proven UI framework for desktop applications and, with community support, is ported to Android and iOS as well. It is possible to develop mobile applications in JavaFX which can run on Android and iOS. JavaFXport is a group outside Oracle that has come up with a framework to port JavaFX applications on Android. Other related community projects are at <http://bitbucket.org/JavaFXports/android> and <http://gluonhq.com/open-source/JavaFXports/>.

By: Praveen Srivastava

The author works as senior engineering manager at Oracle, Bengaluru, and leads the development of Java platform libraries using open source. He has vast experience in software development, and can be contacted at praveen.s.srivastava@oracle.com.

Electronics Projects Vol. 26 is the latest volume in the series, available in digital form.

It is a compilation of **21 construction projects and 71 circuit ideas** published in Electronics For You magazine.

This collection of tested circuit ideas and construction projects in a handy volume would interest all classes of electronics enthusiasts—be they students, teachers, hobbyists or professionals!

Electronics Projects Vol. 26 is available on the following digital magazine stores:
