

“WE ARE AIMING TO MAKE RED HAT A GUIDING LIGHTHOUSE FOR DEVELOPERS ALL ACROSS THE GLOBE”

The open source world is getting bigger with the arrival of new solutions. But Indian developers are yet to play a vital role in its expansion. **Ray Ploski**, *director of developer marketing and strategy for Red Hat*, and **Bob McWhirter**, *director of Polyglot for Red Hat*, in a conversation with **Jagmeet Singh** of *OSFY*, talked of some new ways to enhance developer engagements from India.

Q What does Red Hat have for developers in India?

Ploski: Red Hat primarily focuses on making things easier for Indian developers. As of April last year, we have started the Red Hat Developers Program, which is a no-cost initiative to give away solutions like Red Hat Enterprise Linux (RHEL) and Red Hat JBoss Middleware for free. We ask developers in this model to pick up our tools and use them for their own solutions. What we are trying to establish about the solution is that developers can be successful with the tools and technologies in just their 9-to-5 schedules, from Monday to Friday. They don't need to spend their nights, weekends or holidays to develop new offerings. Ultimately, we are aiming to make Red Hat a guiding lighthouse for developers all across the globe.

McWhirter: We are offering a zero-cost product model as the open source is always free for developer projects. Normally, developing a product from a prototype project requires quite a large transition. But with our program, you can start immediately with the product and reduce the time consumed in the development.

Ploski: We are focusing on corporate developers, who are
