

Are You In Suspense?

Are you wondering what happened to your order or payment, even after a fortnight? But did you mention your name and address clearly while sending payment, and what the payment was for?

We get several payments every month without adequate instructions or even identity of the person sending the payment. As a result we are unable to take appropriate action on these, till we get a complaint - if at all.

At EFY, we want you to be our satisfied customer. So please do let us know in case your payment or instructions are not even acknowledged within a fortnight. We are not that lazy!

EFY GROUP
Technology Drives Us

provide an upgraded Platform-as-a-Service (PaaS). Additionally, there are unified management tools such as CloudForms. All these new products will come in an easy-to-deploy solution through Red Hat Cloud Suite.

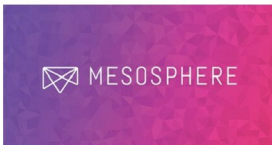

"Red Hat OpenStack Platform 8 and Red Hat Cloud Suite showcase the power of Red Hat's open innovation, with solutions that can address nearly any private cloud deployment scenario, while at the same time delivering a streamlined cloud-native application development platform coupled with the needed enterprise-level controls for cloud management and improved security," Tim Yeaton, SVP of the infrastructure business at Red Hat, said in a statement.

As a co-engineered solution with the features of RHEL and Red Hat's native OpenStack technology, Red Hat OpenStack Platform 8 is designed for network function virtualisation (NFV) and software-defined networking (SDN) deployments. It is based on the OpenStack community 'Liberty' release.

Similar to the core OpenStack model, the new Red Hat OpenStack platform comes bundled with offerings like automated upgrades and real-time KVM. Moreover, there is improved network I/O performance with DPDK-accelerated Open vSwitch and the OpenDaylight networking plugin to provide a software-defined network.

To extend management and infrastructure capabilities, Red Hat Cloud Suite has some new management tools directly from Red Hat Satellite. The package also has the operations management service, Red Hat Insights and Kubernetes-based container orchestration.

Mesosphere's DC/OS data centre platform is powered by Microsoft and other tech giants

To take open source to new levels, cloud computing startup, Mesosphere, has developed a new community for its data centre operating system (DC/OS). The new platform is not just the newest, large-scale open

source solution but is also the latest offering that has the direct support of more than 60 tech companies, including Microsoft, Puppet, EMC, Autodesk, Cisco and Accenture, among others.

Unlike a traditional data centre OS that requires multiple software infrastructure platforms, the Mesosphere DC/OS supposedly provides an 'easy deployment' of applications on a single platform. There are components like

service discovery and load balancing, deployment and package management, logging and metrics, as well as Web and command line user interfaces. Moreover, the platform is sufficient to run your tasks on shared resources by

extending the built-in open source capabilities.

"The product of years of work by Mesosphere, and backed by dozens of partners big and small, DC/OS gives all companies the foundation they need to thrive in a software-defined economy. Keep reading to learn more about how
