

YOU SAID IT

Need articles on Raspberry Pi

I have been reading OSFY since the last two years. I find it very helpful for Linux enthusiasts and it motivates me to try new things. Coincidentally, I recently purchased Raspberry Pi B2. As dramatic as it sounds, I received my copy of OSFY yesterday while downloading Raspbian, and was surprised and happy when I saw that this month's DVD already had Raspbian on it. Thanks a lot for including it on the DVD.

If possible, please include some articles on Raspberry Pi. It would help hobbyists like me. And keep up the awesome work guys!

ED: First of all, a big thank you for your words of appreciation. It really feels good to know how you benefited from the magazine. We have featured a few articles on Raspberry Pi. As the topic is currently hot, we will surely include more articles on Raspberry Pi and IoT in upcoming issues of OSFY. Do continue sharing your opinion with us, as this motivates us and helps us to deliver even better.

'Elementary OS' in the next DVD

It would be really helpful if you could add 'Elementary OS' in next month's DVD. It's not always possible to download it when you don't have a good Internet connection.

ED: Thanks for the suggestion. We value our readers' opinion and will surely carry Elementary OS in one of the forthcoming issues of OSFY.

Request for articles on NuTyX and LFS

I have been a long-time subscriber of *LFY/OSFY* and I have preserved all the issues, right from the very first copy.

I am happy to note the contents of the April issue of *OSFY*. The articles, 'A Beginner's Guide to Linux,' and those covering the Z file system, GRUB, etc., will be helpful in attracting the newbies, especially students. Periodically, I've noticed that there are always some requests for articles for beginners.

The current issue of *Distrowatch* has a news item on NuTyX Linux and points to nutyx.org. The 64-bit ISO is only 243MB in size and we can easily make a bootable USB using the *dd* command. The system loads in a few minutes in an Atom board with 2GB RAM—the fastest I have experienced. The only issue is that it is better to have a separate hard disk. Initially, we get only the command mode and though the documentation refers to *xfce4*, I am yet to try this.

With the experience gained from your magazine, I tried LFS-5 sometime back and managed to install both the console and GUI modes. Now I have managed to install LFS-7.9 in console mode without any problems, just in two days.

Hence, I wanted to request your editorial team to give some attention to both LFS and NuTyX so that more Linux enthusiasts are won over. The way Raspberry Pi has attracted students, hackers and hobbyists should be an eye-opener for us.

ED: Thanks a lot for the feedback. It really makes us feel good to know that you like the articles published in the magazine and have preserved all issues of OSFY. Knowing how readers have benefited from the contents of the magazine is very rewarding and motivates us to come up with even better issues of the magazine. We value feedback from our readers and always try to implement suggestions that would interest most of the readers. So do keep reading the magazine as we will soon feature articles on NuTyX and LFS.
