Keywords in the article
[u'development', u'smartphone', u'simplify', u'mobile',
u'apps', u'app', u'hybrid', u'framework', u'ui',
u'browser', u'ionic', u'native']
```

Article Summary
To assist developers in increasing the speed of app development, there are various app development frameworks. Native app testing (device): Another method to test the app is as the native app in the device. Ionic is a promising open source mobile UI framework that makes the hybrid app development process swifter and smoother. This article presents Ionic, which is a framework for hybrid mobile app development.

Figure 2: Python-Goose features

Figure 3: A sample image for text extraction

So native app development requires specialized development teams.

The major features of the Newspaper library are its multi-threaded article-downloading framework, summary extraction and support for around 20 languages.

Python-Goose

Goose is a popular library for article extraction, which was originally developed for the Java ecosystem. Python-Goose is a rewrite of Goose in Python. The primary objective of Goose is to extract information from news articles. It can be installed with the following commands:

```
mkvirtualenv --no-site-packages goose
git clone https://github.com/grangier/python-goose.git
cd python-goose
pip install -r requirements.txt
python setup.py install
```

The Python version of the Goose library was developed by Xavier Grangier. The features of Python-Goose are as illustrated in Figure 2.

The Newspaper library, which was covered earlier, uses the Goose library.

```
from goose import Goose
```

```
url = 'http://opensourceforu.com/2016/02/ionic-a-ui-framework-to-simplify-hybrid-mobile-app-development/'
g = Goose()
article = g.extract(url=url)
print("Title:")
print(article.title)
print("Meta Description")
print(article.meta_description)

print("First n characters of the cleaned text")
print(article.cleaned_text[:20])
```
