

“What we like about **open source** is that we can tweak it the way we want to”

Nitin Mishra, senior VP, products and solutions, Netmagic (an NTT Communications company) was at **Open Source India (OSI)**, Bengaluru, in November last year. In a freewheeling chat with **Rahul Chopra of OSFY**, he shared his thoughts on what Netmagic does and what open source means to the company.

Nitin Mishra, senior VP, products and solutions, Netmagic

Q. Could you describe what Netmagic does?

A. Netmagic is a managed IT services provider, which provides all the components of Infrastructure-as-a-Service (IaaS), right from co-location, managed hosting to the public cloud and Storage-as-a-Service. On top of this, we provide very high quality managed services that cover databases, operating systems and certain applications.

Q How have you differentiated yourselves from players like Rackspace, or other Indian players? What you are saying is very similar to what data centre solutions providers offer. Some provide barebone services and some provide complete services. Netmagic seems to come under the latter category; so what would be your USP?

A. I think we have multiple USPs. The first is clearly the strength we have in managed services and the depth of

the skills that are available. This includes our processes, rigour training, and customer engagement. That is why our customers leverage us for the IT management, support and uptime that we provide.

The second aspect is the scale that we have. Today we have nine data centres. Our flagship data centre itself has five floors, with 2787 sqm (300,000 square feet) of space, and is equipped with all the latest technologies including SDN deployment. We have deployed the spine leaf architecture, which is the first of its kind in the country. We have brought in these innovations to our data centres to complement the scale that we have built.

The third USP is that we are backed by NTT Communications. So we can offer help not only in India, but we support requirements which go beyond the country. Another value addition is the experience we have in building
