

This is a Debian-based Linux distribution aimed at advanced penetration testing and security auditing. Kali is the most advanced Linux distribution — it comes with the stability of Debian, along with the latest versions of the many outstanding penetration testing, forensics and reverse engineering tools created and shared by the information security community. Kali Linux is developed, funded and maintained by Offensive Security, a leading information security training company. The bundled DVD is a live edition of the 64-bit architecture. The complete documentation on using Kali Linux can be found at <https://www.kali.org/kali-linux-documentation/>

Raspbian is a free operating system based on Debian GNU/Linux and optimised for the Raspberry Pi hardware (the armhf processor architecture). Raspbian comes with over 35,000 packages or pre-compiled software bundled in a nice format for easy installation on a Raspberry Pi. Raspbian 2016 is the latest version of the project's Debian-based distribution for the ever so popular Raspberry Pi computer. This release has an experimental OpenGL driver for the desktop, which uses the GPU to provide hardware acceleration. You can find the zip file on the DVD under the Raspbian folder. Detailed documentation can be found at <http://www.raspbian.org/RaspbianDocumentation>.

Live CDs/DVDs have the ability to run a complete, modern OS on a computer even without secondary storage, such as a hard disk drive. The CD/DVD directly runs the OS and other applications from the DVD drive itself. Thus, a live disk allows you to try the OS before you install it, without erasing or installing anything on your current system. Such disks are used to demonstrate features or try out a release. They are also used for testing hardware functionality, before actual installation. To run a live DVD, you need to boot your computer using the disk in the ROM drive. To know how to set a boot device in BIOS, please refer to the hardware documentation for your computer/laptop.
