

Start Your VoIP Calling Card Business Using ASTPP

Start your VoIP Calling Card business using

ASTPP

Brought to you by:

You've always wanted to be an entrepreneur but were perhaps held back because of lack of technical knowhow. Well, here is your chance to set up a VoIP calling card business. This article gives you detailed steps on how to go about it. Who knows, this might just be the launch of an entrepreneur... YOU!

ASTPP is a powerful and advanced open source billing solution for FreeSwitch (VoIP). Being a Class 4 and 5 SoftSwitch, it supports prepaid and postpaid billing along with call rating and credit control features. It also provides all major demanding features such as Calling Cards, Least Cost Routing (LCR), DID management, resellers management, and many more.

ASTPP is open source and will always remain so.

Why ASTPP?

Whether yours is a new startup or a huge established set-up of VoIP billing services, ASTPP fits in your environment and gives you a quick start.

The major benefit of using any open source solution is the large number of community members behind it who take part in active discussions – which is why ASTPP is the best. So far, ASTPP has attracted thousands of users and developers through its attractive UI, easy architecture and quick releases of new versions, along with stable widely-used features.

Moreover, the ASTPP team has released an Android

mobile SIP dialer, called the ASTPP Dialer, which is freely available on Google's Play store. This provides mobility to its users. ASTPP clients can register their user accounts directly in their mobile devices and start making and receiving calls, thereby being able to see the real-time balance of the configured account.
