Figure 1: Detailed features of ASTPP

- Pinless authentication
 - Strong LCR terminology
 - Free package management
 - Concurrent calls control per customer and trunk line
 - Supports PayPal payment gateway
 - Mass mailing
 - API support for easy integration
 - Separate login for different roles: admin, sub admin, reseller, customer and service provider
- Please refer to Figure 2 for the detailed feature list.

Steps to starting a Calling Card business

If you are planning to start a Calling Card business or want to become a wholesale/retail VoIP service provider, then you are in the right place. All you need is a working copy of ASTPP loaded on your server, which is configured based on your requirements. So let's begin:

1. Get ASTPP loaded on a server that has good hardware specifications and a fast Internet speed.
2. Get a reliable local and long distance VoIP provider. We recommend *Ipcomm*s as one of the best VoIP providers. By using *Ipcomm*s, you will have all the rates loaded automatically in your ASTPP, by default, which will reduce your efforts and the time required to set things up. Your ASTPP set-up will be preloaded with two free SIP trunk lines and 50 outbound minutes for you to try, all provided by *Ipcomm*s.
3. Get a direct inward dialling (DID) number and configure it as the access number, which your customers can dial in and connect with your system. As a result of the partnership that *iNex*trix has with *Ipcomm*s for ASTPP, you can get a FreeDID from *Ipcomm*s.

Figure 2: Calling card concept flow

Figure 3: Components

4. Configure your tariff plan and load rates with your profit margin.
5. Generate bulk Calling Cards from the ASTPP portal and print them out.
6. Market your Calling Cards to grocery stores, convenience stores and foreign owned stores, where customers shop for services that relate to their home countries.

System requirements

Minimal hardware requirements

- 2GB RAM
- 40GB hard drive
- 64-bit OS (Centos/Debian latest version)
- High-speed Internet connectivity

VoIP requirements

- VoIP provider to terminate outbound calls
- DID's to receive incoming calls

Figure 4 shows the components that are needed.

Quick installation steps are given below:

```
# wget --no-check-certificate https://goo.gl/HjHXlF -O install.sh
# chmod +x install.sh
# ./install.sh
```

Note: There may be some restriction on VoIP technology usage, based on country you reside.
