to extend the PageBot prototype with a method having the prefix *locateElementBy*. It will take two arguments - the first to locate the string and the second to record where it has to be searched.

Step 4 - Using the user extension:

1. Go to *Options* -> *Options* in Selenium IDE.
2. Browse the location of the recently created Selenium Core Extension in the general tab of *Options*.
3. Press OK and restart the IDE.
4. One can find the commands called *textUpperCase* and *textUpperCaseAndWait* in the command list.

One can get all these extensions and numerous more from the download segment of the SeleniumHQ official website <http://docs.seleniumhq.org/download/>

While Selenium is no magic tool for the issues challenging the Web application analyser, it handles a significant amount of the problems. Selenium is worth a look for those requiring a capable Web testing tool. **END** 

By: Nishtha Srivastava, Priya Daxini and Jitendra Bhatia

Srivastava and Daxini are both currently studying for their M. Tech degrees in computer science and engineering from Nirma University. You can contact them at nishtha8080@gmail.com and priyadaxini09@gmail.com.

Bhatia works as a senior assistant professor with the CSE department of the Institute of Technology, Nirma University for the past nine years. You can contact him at jitendra.bhatia@nirmauni.ac.in
