BlackBerry's first Android smartphone

Canadian telecommunications and wireless equipment company, BlackBerry, has launched its first ever smartphone with an Android OS. It's called BlackBerry Priv.

The smartphone features a 13.7cm (5.4 inch), WQHD (2560 x 1440 pixels) AMOLED display curved-edge screen with Corning Gorilla Glass 4, including a slide-out keyboard. The device is powered by Qualcomm's Snapdragon 808 hexa-core processor and runs on the Android 5.1.1 Lollipop OS. It comes with 3GB RAM and an Adreno 418GPU, along with 32GB of onboard storage, besides a microSD card slot for further expansion up to 2TB.

The BlackBerry Priv sports an 18 megapixel rear shooter with OIS (Optical Image Stabilisation) and PDAF (Phase Detection Auto Focus), which can record 4K videos at 30fps and full HD videos at 60fps. As for the front, the device sports a 2 megapixel camera for selfies and video calling. Armed with a 3,410mAh battery and Quick Charge 2.0 support, the connectivity options of the smartphone include 4G LTE, Wi-Fi 802.11ac, USB 2.0, Bluetooth 4.1LE, GPS and Wi-Fi Direct.

The device is available from all retail and online stores.

Waterproof speakers from Ultimate Ears

American custom sound accessories manufacturer, Ultimate Ears, has released its second set of speakers in India—the UE Roll, which follows the launch of the UE Boom.

Shaped like a pancake, the speaker weighs just 330 grams. The device's rear is made of a waterproof rubber material and the front face has a durable stitched fabric with a comfortable wire mesh.

The speakers come with a wrist suspender that is a marine-grade bungee suspender, the company claims. They have a frequency response of 108Hz-20kHz, with audio powered by two drivers and two three-four tweeters.

The speakers offer the maximum

Nano powerline adapter from TP-Link

TP-Link, a global provider of consumer and SMB networking products, has recently unveiled the TL-PA2010, the latest model of its AV200 nano powerline adapter. The device is a great choice as a complete home solution, as it connects all network-compatible devices — from computers and game consoles, to set-top boxes for IPTVs, printers and NAS hard drives.

It is designed to minimise the usage of additional wires or the need for unnecessary drilling. The TL-PA2010 establishes a networking infrastructure using the existing electric wires by simply plugging into power sockets and pushing the pair button on the adapters.

The device enables users to set up a hassle-free powerline network within minutes, complete with 128-bit AES encryption for network security and data protection.

Price:
₹ 2,499

The TL-PA2010 kit features Home Plug AV technology, which can provide users with a stable high speed data transfer rate of up to 200Mbps along with the power saving mode, which can reduce energy consumption by 75 per cent.

It is available via Amazon and eBay.
