IoT providers with cloud connectivity

RTI (www.rti.com): RTI is one of the oldest and pioneering Internet of Things platform provider. Company sources claim that it is the most influential industrial IoT company.

Connexx DDS is specifically designed for intelligent machines and their related cyber-physical systems. Unlike messaging middleware designed primarily for IT systems, Connexx DDS does not require message brokers, directory services, servers or administration. The core messaging infrastructure is wholly contained in libraries linked to your applications. Connexx DDS can provide a unified message bus across operational technology (OT) systems deployed at the edge and IT systems deployed in a data centre or cloud. It also integrates easily with an existing enterprise messaging system or enterprise service bus (ESB).

The markets addressed include aerospace, energy, transport, industrial equipment and factories, medical devices, trading and betting, unmanned vehicles, etc. The FastTrax program helps in adopting the platform to customer needs.

ThingWorx (www.thingworx.com): ThingWorx is one of the earliest IoT software platforms designed to build and run the applications of smart, connected products.

The platform performs end-to-end application modelling, creates user interfaces with mashups, has an event driven execution engine, offers device (thing) management, intelligence tools, etc.

The markets addressed include aerospace, automotive, consumer products, electronics and high-tech, industrial equipment, medical devices, smart cities and all other smart initiatives.

Cisco IoT (developer.cisco.com/iot): Cisco offers new ways to manage and store data in the cloud and data centre. It offers products, services, consulting and industry-specific solutions that can improve productivity

and efficiency in manufacturing, mining, oil and gas, transportation and utilities.

Cisco IoT Cloud Connect components are offered in multiple packages, giving greater flexibility, as shown in Figure 4.

The new Cisco Virtualized Packet Core solution redefines agility for service providers and offers ways to capture untapped revenue opportunities, particularly with the
