proliferation of Internet of Everything (IoE) and M2M connections. The Cisco Virtualized Packet Core solution combines all packet core services – for 4G, 3G, 2G, Wi-Fi, and small cell

networks – into a single solution. Since these services are virtualised, they can scale capacity and introduce new services much more quickly and cost effectively.

Salesforce (www.salesforce.com/in/iot-cloud): Powered by Thunder, IoT Cloud connects all your data from the Internet of Things to the rest of Salesforce for better insights and real-time customer actions.

Salesforce Thunder is perhaps the world's most scalable event processing engine, designed to ingest and orchestrate billions of events from the connected world in real-time. Thunder enables businesses to unlock insights that were previously invisible, and allows anyone to take proactive, personalised action from any device, to get closer than ever to customers.

The market addressed is similar to all the enterprises currently using Salesforce.

GE Predix (www.predix.io): This aims to be your cloud platform for the industrial Internet. Initiated by General Electric, the Predix platform aims to connect industrial assets to the cloud and to each other for asset performance management, operations optimisation and better profitability.

GE wants this platform to be utilised in various industries where it can provide algorithms for monetisation. It also aims to provide a community platform for developers in other industries to develop algorithms for monetisation.

Cloud providers offering IoT connectivity

IBM Bluemix (console.ng.bluemix.net): Bluemix is an open standards, cloud platform for building, running, and managing apps and services.

Bluemix provides a single development and management experience across any combination of public, dedicated, and local Bluemix instances. It allows choosing where apps, data and other services can live, without compromising on the speed and economics of the cloud.

Bluemix tools help to connect securely to different environments, transform and synchronise data, and create and expose enterprise APIs to the Bluemix catalogue. Bluemix provides
