

Figure 7: Identifying the element by ID

Figure 8: Sample script

the limitations of the Selenium IDE, which supports the Firefox browser only. To access the other drivers, you need to create a variable of WebDriver.

Sample script

You can follow these steps to search for Selenium on google.com.

- 1) First, identify the field. In the above example, the text box for the search should be identified.

- 2) Elements can be identified in two ways:
 - a. Using the Selenium IDE
 - b. By inspecting the element
- 3) Right-click on the field and select the *Inspect Element* option.
- 4) By clicking on *Inspect Element*, the screen depicted in Figure 7 will open, and you can select any of the

Figure 9: Response on executing the script

options to identify the element as described in Table 1.

Sample script using the Firefox driver in Eclipse

A sample script using the Firefox driver in Eclipse is shown in Figure 8.

On running the script, the page shown in Figure 9 gets opened.
