

Figure 5: Issue queue

Figure 6: Tests passed

standards and a few other basic aspects. If your patch passes the tests, you will get a green coloured box with the patch inside it, just like what's shown in Figure 6.

The patch will then get reviewed by the developer community and if there are any more modifications needed, you will be informed. If you have uploaded the right patch,

the issue will be closed. The review process may take a bit of time, as there are many issues which are under review daily.

Get connected with developers

Always ensure that you are in good contact with community developers. Interact with them as much as possible. IRC channels are available for those behind the development of Drupal to communicate with developers. You can contact them at #Drupal, #Drupal-contribute and #drupa-support at Freenode. You can talk with mentors here. You can interact with the issue reporters to get a clear understanding of the problem. There are also mailing lists you can subscribe to, to ensure that you don't miss any updates from the Drupal community. You can get these mailing lists at <https://www.Drupal.org/mailing-lists>. Ensure that you are aware about the various Drupal conferences happening, and try to attend some of them. Drupal is also offering grants for students.

Google Summer of Code is another opportunity for students to get involved with Drupal projects. You can work on some awesome projects and also get connected to many mentors.
