CPU resources.

Aggregate report: This displays the results in table form for every sample request. Information provided in the table includes the average time for every sample, median, 90 per cent line, 95 per cent line, error per cent, longest or shortest time for the sample throughput and so on.

Note: If timers are included in the test plan, then that time will also be included in the calculations.

Data can be directly copied and pasted in an Excel sheet as per the requirements. There is also a **Save** button that's provided at the end to save the complete table.

Graph results: This displays results in the form of a graph that plots all sample times. It also provides additional information about things such as median, deviation, average, throughput and so on.
