

```
1) Add kali linux repositories
2) Update
3) Remove all kali linux repositories
4) View the contents of sources.list file

What do you want to do? > 3
All kali linux repositories have been deleted !
```

Figure 7: Sample output: Deleting repositories

```
1) Add kali linux repositories
2) Update
3) Remove all kali linux repositories
4) View the contents of sources.list file

What do you want to do? > 4
http://archive.ubuntu.com/ubuntu trusty main universe restricted multiverse
http://security.ubuntu.com/ubuntu/ trusty-security multiverse main restricted universe
http://archive.ubuntu.com/ubuntu trusty-updates multiverse main restricted universe
```

Figure 8: Sample output: Option 4

First, we update the repositories by choosing Option 2 and then we add the Kali Linux tools. To add the tools, select Option 1.

Now, to delete all repos, select Option 3, as shown in Figure 7. To view the contents of the *source.list* files, select Option 4, as shown in Figure 8. To go one step back to the main menu, simply type in 'back', like in Figure 9.

To check out the categories of Kali Linux tools available, select Option 2 in the main menu. We can either install a few tools according to what we require by typing in the number next to it, or we can type in '0'. This will install all the tools. It will look something like what's shown in Figure 10.

Installing the *Classic Menu* indicator

This is a notification area applet. To install it, just select Option 3, as shown in Figure 11.

CAUTION

It is advised that we remove all the Kali Linux tools before we update the system to prevent any problems.

So that's it! You have the Katoolin script installed on your system. You can now experiment with Kali Linux tools on the Debian-based operating system of your choice. 

```
1) Add kali linux repositories
2) Update
3) Remove all kali linux repositories
4) View the contents of sources.list file

What do you want to do? > back
Add kali repositories & update
1) View Categories
2) Install ClassicMenu Indicator
3) Install Kali menu
4) Help
```

Figure 9: Sample output: Back

```
1) Add Kali repositories & update
2) View Categories
3) Install ClassicMenu Indicator
4) Install Kali menu
5) Help
