

Figure 1: NERDTree

2) Using NeoBundle

Clone the repo in your directory, as follows:

```
git clone https://github.com/Shougo/neobundle.vim ~/.vim/
bundle/neobundle.vim
```

Configure `vimrc`:

```
if 0 | endif
if &compatible
    set nocompatible
endif

set runtimepath^=~/.vim/bundle/neobundle.vim/

call neobundle#begin(expand('~/.vim/bundle/'))
" Let NeoBundle manage NeoBundle
" Required:
NeoBundleFetch 'Shougo/neobundle.vim'

call neobundle#end()
" Required:
filetype plugin indent on

" If there are uninstalled bundles found on startup,
" this will conveniently prompt you to install them.
NeoBundleCheck
```

 **Note:** Don't set the `neobundle` setting in `.gvimrc`!

You can install the plugins in the following two ways:

- Launch vim run: `NeoBundleInstall`
- Using the command `vim +NeoBundleInstall +qall`

3) Using Vim Plug

Clone it in your PC, as follows:

```
curl -fLo ~/.vim/autoload/plug.vim --create-dirs \
https://raw.githubusercontent.com/junegunn/vim-plug/
master/plug.vim
```

Figure 2: Vim Normal Mode

Figure 3: Vim Insert Mode

Figure 4: Vim Visual Mode

Set up the `.vimrc` file:

```
call plug#begin('~/.vim/plugged')
Plug 'scroolose/nerdtree', { 'on': 'NERDTreeToggle' }
Plug 'tpope/vim-lsp', { 'for': 'clojure' }
Plug 'bling/vim-airline', { 'for': ['clojure', 'scheme'],
'rt': 'vim' }

call plug#end()
```

I recommend the use of Vim Plug as it is easy and simple to use.

Installation of NERDTree

Try to install NERDTree by using the Vim Plug configuration. With your plugins installed, restart Vim and type `:NERDTree`.

This gives the current directory window. NERDTree shows the current files in the `Documents` directory (Figure 1). You can shift between the tree and file using the `Ctrl+ww` keys.

By default, Vim has three modes (see Figures 2 to 4). Sometimes it is very difficult to identify which mode you are in. Vim Airline provides a colourful GUI. This not only helps you to identify the mode, but also to change the colour in different modes.
