

have specified in the code has a copy of the image *yourfile.jpg*. Similarly, GET can also be processed. The complete code snippet is available at <http://falcon.readthedocs.io/en/stable/user/tutorial.html>.

Falcon error handling

Falcon offers a set of exceptions that you can raise when something doesn't go as per plan. The following items may be used for this purpose:

```
falcon.HTTPBadGateway
falcon.HTTPBadRequest
falcon.HTTPConflict
falcon.HTTPError
falcon.HTTPForbidden
falcon.HTTPInternalServerError
falcon.HTTPLengthRequired
falcon.HTTPMethodNotAllowed
falcon.HTTPNotAcceptable
falcon.HTTPNotFound
falcon.HTTPPreconditionFailed
falcon.HTTPRangeNotSatisfiable
falcon.HTTPServiceUnavailable
falcon.HTTPUnauthorized
```

```
falcon.HTTPUnsupportedMediaType
falcon.HTTPUpgradeRequired
```

A code snippet to handle the HTTPNotFound is shown below:

```
try:
    resp.stream = open(image_path, 'rb')
except IOError:
    raise falcon.HTTPNotFound()
```

To summarise, Falcon is handy when you want to set the dependencies to the lowest possible level. Its high performance with a clean REST architectural style makes it a good option to try out. One other major advantage of using Falcon, apart from it being lightweight and high in performance, is the availability of extensive documentation and an active community. [END](#)
