

devices, which is imperative in this age of mobility.

Q Apart from different middleware solutions, you also offer enterprises an API management strategy. Why is such planning required to garner profits?

API management enables enterprises to expose relevant information on an on-demand basis to their employees, customers and external business partners in a secure, managed, metered and monitored manner. Before the evolution of API management, information could still be exposed but security, metering and monitoring were custom tasks that had to be implemented separately, each time data was to be exposed. API management standardises the process of sharing data with third parties by providing a platform for security, metering, monitoring and management.

Q You have vast experience of Indian and overseas markets. How is India different from developed regions like the US when it comes to the middleware space?

The fundamental difference is that enterprise managers and business owners in India still need to be educated about the benefits of middleware and the core technologies, from the standpoint of how investing in them can benefit their business. The second issue is that most enterprises cannot fathom the price-points of middleware solutions. So pricing models in India tend to be significantly lower than

in developed countries like the US and Europe. Subscription models, which tend to be more reasonably priced, are an increasingly preferred solution and this is the direction that Fiorano is taking in the Indian market.

“The best way to select a middleware solution is not to focus on any ‘PowerPoint presentations’ but to conduct an actual proof-of-concept.”

Q Lastly, how would India help you fulfil your ultimate vision of a ‘distributed world’?

India has lots of mobile Internet users, second only to China in the world. Importantly, Indian users are not wary of exploring new technology or solutions if these help their lives. This is a significant point since in many countries (such as Japan, for instance) people tend to be more conservative. We believe that with the proper innovations in consumer-based distributed computing (and Fiorano has several such innovations in its bag), India can become an explosive and world-leading market for Fiorano. We are confident this will happen.
