

## LibreOffice 5.2 launched with tons of new features

The Document Foundation has released LibreOffice 5.2. This newest version has several new features to compete against proprietary solutions including Microsoft Office. Among them, document classification comes first. This feature is designed to classify your documents as per the TSPC standard. The suite automatically stores the classification level in the XML code of the document.

Apart from the classification, the updated LibreOffice comes bundled with some financial features. There is a forecast function to predict future financial details through the Calc spreadsheet program. The suite now also supports multiple

signature descriptions alongside the ability to import and export signatures from OOXML files.

The Document Foundation has additionally provided some improved interoperability features that include better import filters within Writer as well as the support for Word for DOS legacy documents. To enhance security over cloud storage, LibreOffice 5.2 has two-factor authentication for Google Drive. The office package also sports program modules with new drawing tools such as filled curves, polygons and freedom lines.

LibreOffice is already one of the leading open source office suite alternatives to Microsoft Office. The Document Foundation estimates that it has been downloaded over 140 million times since its launch in 2011. Nearly 80 people contribute each month to improve this community-driven project.

The latest version of LibreOffice comes in new packaging formats to deliver an upgraded experience. You can leverage its features through Snap on your Linux-based desktop.

Going forward, open source enabler The Document Foundation is set to launch LibreOffice Online. This new Web-based offering will take on Google Docs by letting users access its features directly from their servers.

"LibreOffice is growing fast, thanks to distinctive advantages such as the standard document format, which is recognised by a growing number of governments as the best solution for interoperability," said Thorsten Behrens, one of the directors of The Document Foundation.

The new release will get upgraded to LibreOffice 5.3 in February next year. Meanwhile, you can experience its features by installing the free package on your Windows, Mac OS or GNU/Linux system.

## Black Duck launches Centre for Open Source Research and Innovation

Black Duck has announced the launch of its Centre for Open Source Research and Innovation with an aim to increase the use of open source software for application development. The new centre will be based at Black Duck's Massachusetts headquarters, but the two new Black Duck research groups in Canada and Europe are likely to play major roles in the application release and development cycle.

"Open source is the way today's applications are developed, and we expect

## Parrot Security OS 3.1 released with Linux kernel 4.6 and PHP 7 support

To deliver an advanced experience to security professionals and ethical hackers around the world, Parrot Developers has released Parrot Security OS 3.1. The new Debian-based operating system works on Linux kernel 4.6 and comes preloaded with PHP 7 support.

As a successor to Parrot Security OS 3.0 that was released a month back, Parrot Security OS 3.1 comes with the new Linux kernel. The group behind the Linux distribution has also added QtCreator 4.0.2 and Qt framework 5.6.1 to help white hat hackers. Likewise, there is support for GCC (GNU Compiler Collection) 4.8.5, 4.9.3, 5.4.0 and 6.1.1 as well as CLANG 3.6-33 and 3.8-2.

To improve the user experience, the new Parrot Security OS version has switched from MySQL to the MariaDB database engine. There are some stability improvements and bug fixes to improve the overall platform for security assessments and penetration testing.

Apart from the major systemwide changes, the updated Parrot Security OS has some tweaks on the interface front. There is an updated Parrot core and menu in addition to some new tools. Drivers support on the platform has also been improved to let hackers use their new hardware with the operating system. Besides, the platform comes with new zuluCrypt and AnonSurf modules and includes Tor Browser launcher.

You can download Parrot Security OS 3.1 on your system directly from the official Parrot Developers website.
