

DVD OF THE MONTH

Enjoy a cool Linux distro on your computer.

PCLinuxOS FullMonty KDE64 2016 Desktop (Live)

PCLinuxOS is a free, easy-to-use Linux-based operating system for x86_64 desktops or laptops. This safe and secure operating system comes with a complete Internet suite for surfing the Net, sending and receiving email, instant messaging, blogging, tweeting and watching online video. The live DVD bundled with OSFY can also be installed on your computer. The LiveDVD mode lets you try PCLinuxOS without making any changes to your computer. The OS is designed to be used by beginner, intermediate or advanced users. It comes with kernel 4.4.4 LTS with the full KDE 4 Desktop.

PCLinuxOS LXQT 2016 Desktop (Community)

Community releases of PCLinuxOS ISOs are created by the community, for the community and are available in various default desktop environments. The bundled DVD has the ISO of PCLinuxOS with the LXQt desktop environment. LXQt is the Qt port and the upcoming version of LXDE, the Lightweight Desktop Environment. It is focused on being a classic desktop with a modern look and feel. You can find the live, bootable ISO images available in the *other_isos* folder on the root of the DVD.

What is a live DVD?

A live CD/DVD or live disk contains a bootable operating system, the core program of any computer, which is designed to run all your programs and manage all your hardware and software.

Live CDs/DVDs have the ability to run a complete, modern OS on a computer even without secondary storage, such as a hard disk drive. The CD/DVD directly runs the OS and other applications from the DVD drive itself. Thus, a live disk allows you to try the OS before you install it, without erasing or installing anything on your current system. Such disks are used to demonstrate features or try out a release. They are also used for testing hardware functionality, before actual installation. To run a live DVD, you need to boot your computer using the disk in the ROM drive. To know how to set a boot device in BIOS, please refer to the hardware documentation for your computer/laptop.

To use this image available in the *other_isos* folder, you either need a drive that can create or 'burn' DVDs or a USB Flash drive at least as big as the image. Or, you can use it directly with any virtualisation software like VirtualBox.
