Figure 3: Creating a database of all files

You can put the *finder.exe* file in the Windows folder, but if you place this in a different folder, you will have to set the path to that folder. Let us run the program. You can see from Figure 3 that just 33 seconds are required to create the database. Now search the file and see the power of the program.

```
C:\Users\Nihil>find . -name *.mp3
Path             File name
-----
Movies\Music : tumbinthen_nyrcibn.mp3
Jr : tumbin.mp4

Total files = 2
Time taken to search: 0:00:00.530000
Thanks for using Leiden.com

C:\Users\Nihil>find . -name *.avi
Path             File name
-----
Movies : tum bin 2001 hindi hdrip 720p x264 aac...honb7.avi
Movies\Music : tum bin - flute.mp3
Movies\Music : tum bin guitar.mp3
Movies\Music : tum bin theme 1.mp3
Movies\Music : tum bin theme.mp3
Movies\Music : tum bin.mp3
Movies\Music : tum bin 2.mp3
Movies\Music : tum bin 3.mp3

Figure 4: File searching

I am going to search for songs which contain the string *waada*.

Look at Figure 4. You can see that two searches have taken approximately half a second. The program is case insensitive, so using upper case or lower case doesn't matter. The program also has the power of regular expressions. Let's assume that you want to search files which contain the *wada* or *wadda* strings. Let us look at Figure 5. The regular expression 'a+' means the letter 'a' can appear once or many times. Again, you can get the result in less than one second. Let us consider one more example of a regular expression search. Let's assume that you want to search the files which contain *wad+a* with digit numbers (see the first search of Figure 6). Assume that you want

[illegible]

Figure 5: File searching using regular expressions

```
C:\Users\Mohit>dir "wade+du*"
Path wade731.txt File name

Total file size are 1
Time taken to search 0:00:00.532000

Figure 6: Searching used power for regular expressions

to search the files that start with the string *wa+da* (see the results of the second search in Figure 6).

The program is indeed very useful. Suppose, for instance, you have forgotten the file path but have a vague idea of the file name. You can search the file within one second by using regular expressions. The best part is the speed of the search. You can try searching with the file name repeatedly. But if you use Windows Explorer, each search will take around two to four minutes.  END
