Digisol's 8-port fast Ethernet switch

Digisol, the networking and surveillance brand of Smartlink Network Systems, has launched its 8-port fast Ethernet power-over-Ethernet (PoE) unmanaged switch which is designed to enhance network performance in a compact form factor.

The DG-FS1008PH-A switch offers 8x10/100Mbps fast Ethernet ports with four PoE ports, which are IEEE802.3af compliant and can supply PoE power to PoE devices.

The existing Ethernet cables can be used to power up IEEE802.3af compliant network devices, which eliminates the need for an external power source and power cabling.

The device offers users the flexibility to connect either PoE or non-PoE devices. The switch uses 'store and forward' packet switching technology which ensures reliable data transfer.

It also supports automatic MDI/MDI-X detection, which eliminates the need for crossover cables or dedicated uplink ports.

The feature-rich Digisol DG-FS1008PH-A is available at retail stores.
