

```
> d$V1
[Sample output:
[1] Strongly disagree Disagree Neutral
[4] Agree Strongly agree
5 Levels: Agree Disagree Neutral ... Strongly disagree
> d$V2
[1] 10 13 2 11 7
> lab<- round(d$V2/sum(d$V2) * 100,1)
> pie(d$V2,labels=paste(d$V1,lab, sep = " "),main="Responses"
, clockwise=TRUE)
```

A pie chart will appear in the Plots window as shown in Figure 4.

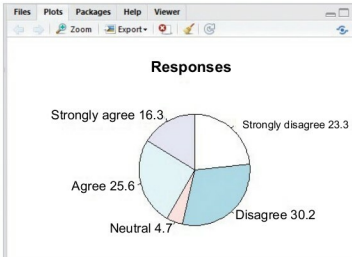

Figure 4: Pie chart in the Plots window

`pie3D()` can be used for generating a 3D pie chart. To use `pie3D()`, it is necessary to install the `plotrix` package:

```
> install.packages("plotrix")
```

```
> library(plotrix)
> pie3D(d$V2, labels=paste(d$V1, lab, sep = " "), main="Response
s", explode=0.2)
```

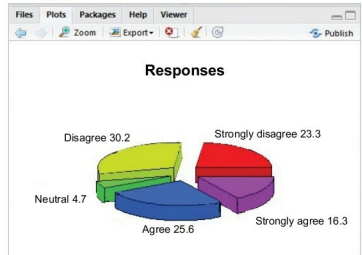

Figure 5: 3D pie chart

R language can be used to perform highly complex operations related to statistics as well as econometrics. It can also be used for working on images and mathematical modelling. In fact, many premier institutions in several countries have made R a part of their regular curriculum, and insist on researchers using this language for carrying out statistical research. [END](#)
