

sandboxed execution, and manual approval for high-risk operations such as merges, deploys, and IAM (Identity and Access Management) changes.

Supply-chain security must now include AI-generated code and dependencies. AI may also suggest usage of a typosquatted package or insecure patterns (unsafe deserialisation, SSRF, injection flaws) unintentionally. Consider AI as you would other untrusted sources of outputs until it's validated by tests and policy checked.

Next, consider model integrity — poisoned training data or compromised retrieval indexes can drive suggestions towards the backdoor. Use provenance checks, controlled knowledge bases, and monitoring for anomalous recommendations. Then there's governance, which needs entirely new policies, such as defining acceptable usage, audit logging of prompts and actions, mapping to compliance (e.g., data residency, access control). For regulated sectors, implement 'privacy-by-design', including role-based access, minimal data exposure, and clear responsibility when decisions are influenced by AI.

Tools like Google Antigravity, Claude Cowork, and GitHub Copilot are not only accelerating traditional activities but also reshaping the very nature of software engineering. By automating mundane tasks, enhancing collaboration, and embedding intelligence throughout the SDLC, these platforms empower professionals to focus on innovation, problem-solving, and delivering value. As AI continues to advance, the boundaries between human ingenuity and machine assistance will blur further, ushering in an era where software development is not just faster and more efficient, but also more creative and resilient. **END** 🐼

👤 By: Dr Magesh Kasthuri and Dr Anand Nayyar

Dr Magesh Kasthuri is a PhD in artificial intelligence and the genetic algorithm. He currently works as a distinguished member of the technical staff (master) and chief architect at Wipro Ltd. This article expresses his views and not of the organisation he works in.

Dr Anand Nayyar is a PhD in wireless sensor networks and swarm intelligence. He works at Duy Tan University, Vietnam, and loves to explore open source technologies, IoT, cloud computing, deep learning, and cyber security.

DIY KIT: Agriculture IoT & AI

Want to create exciting IoT projects for agriculture use cases or agri-IoT projects?

This kit provides everything you need to create typical IoT for agriculture (aka agri IoT) projects.

KIT INCLUDES:

- Soil Sensor
- GSM Module
- Relay Module
- *IndusBoard Coin*

POWERED BY

IndusBoard COIN

Super small sized development board that enables you to create solutions for many use-cases where small size is super important.

SPECIAL INTRO PRICE

₹2,149 (Inclusive of GST)

KNOW MORE / BUY NOW: efy.co.in/agriiot

Developed by the Electronics For You team, for you.

DEALERS: • Om Technology Centre, Bengaluru (Mob: +919845400864)
• Bharathi Electronics: Coimbatore (Mob: +919952228618)
