

Figure 4: Radio signals analysis and waterfall in cloud KiwiSDR

create virtual SDR laboratories where students can perform experiments remotely without physical SDR devices and antennas, similar to virtual labs in cloud computing environments.

There is huge scope for research and development in the SDR domain and cloud-based deployment of radio frequency

analysis. Dynamic spectrum allocation, cognitive radio, interference mitigation, secure wireless communication, AI-

driven signal classification, AI signal intelligence and spectrum sensing are becoming increasingly important in different sectors. The integration of SDR with IoT networks, radio evaluations, 5G, 6G, and satellite communications gives further research opportunities.

In fast-growing markets like India, there is huge and significant potential for indigenous development of SDR hardware, SDR research labs, spectrum analytics platforms and cloud-based RF monitoring systems. Collaboration between industry, academia and government can lead to innovations in radio frequency networks, wireless security, disaster communication systems, defence applications and smart city infrastructure. **END** 🐧

The author is associated with various academic and research institutes for delivering expert lectures and conducting technical workshops on the latest technologies and tools.

Wanna Be Your Own Boss?

DO OPEN SOURCE.

www.opensourceforu.com

Demand for Open Source is sky rocketing. Be it for managing IT infrastructure or development of software—Open Source solutions are what customers are seeking.

All you need to do is develop expertise in an Open Source stack, and then build a team around it!

And, Open Source For You can be your friend and a guide through this journey.
