

SalesAgility joins Open Source Initiative

The Open Source Initiative (OSI) has announced it is enrolling SalesAgility as a member. The OSI is a global non-profit organisation dedicated to promoting and protecting open source software. It has announced SalesAgility, the authors and maintainers of SuiteCRM, as corporate sponsors.

SalesAgility

A SalesAgility source said, "We are excited to be members of the Open Source Initiative. The work the OSI has done over the last 20 years is extraordinary, and we are looking forward to collaborating to ensure the success of open source in all fields."

SuiteCRM is now generally acknowledged to be the world's leading open source CRM solution. Begun in 2013 as a fork of SugarCRM's Community Edition, SuiteCRM is a completely open source CRM solution delivering all the functionality expected of an enterprise-class CRM application.

At the same time, SalesAgility is deeply committed to open source. The company believes in the culture of co-creation, which is inherent to open source and expected to be the future of business applications. SalesAgility has embraced and celebrates the principles of open exchange, collaborative participation, open standards, rapid prototyping, transparency, meritocracy, and community. These are in tandem with the values that the OSI promotes among communities, to drive genuine open source development.

"We're so very pleased to have SalesAgility's support, especially now, as the OSI enters its 20th year," said Patrick Masson, general manager of the OSI.

SauceCon is Sauce Labs' two-day user conference for test professionals. The partnership aims to enable and strengthen LogiGear's ability to ease automation, enable continuous improvement and continuously address delivery pain points. This partnership brings a new depth to LogiGear's test automation expertise and its Selenium testing practices. This will also help client services to help enterprises quickly set up and scale their Web and mobile test automation programs and DevOps transformations.

Enterprise customers of Sauce Labs can now utilise LogiGear best practices to help create easy-to-read, well-organised test suites that can be automated in an efficient and maintainable way. Sauce Labs extends its professional services through partnerships with test automation experts such as LogiGear in order to provide joint offerings that accelerate software development and bring solutions to market faster with the continuous testing cloud for Web and mobile apps.

"With today's incredible demands to release high-quality apps quickly, most organisations see tremendous value in the power of continuous testing that Sauce Labs delivers, but many lack the skills or resources to fully capitalise on it. By leveraging the highly specialised test automation expertise that partners like LogiGear bring to the market, our customers can greatly accelerate the pace of transformation and realise the full promise of continuous delivery and DevOps," said Manuel Ruiz, VP of customer success, Sauce Labs.

LogiGear helps enterprises maximise the ROI and drive the adoption of Sauce Labs and Selenium testing practices. Whether an organisation has already licensed Sauce Labs, wants a turnkey solution, needs help with implementation or has not yet embarked on its continuous testing journey, LogiGear expertise can assist in bringing the transition to fruition.

"Our partnership with Sauce Labs will help us bring a new level of test automation expertise to our clients, ensuring they are exposed to state-of-art expertise and technology. We are also excited to be at SauceCon and continue to accompany and help in guiding test teams through their test automation journeys," said Hung Nguyen, CEO, LogiGear.

Test teams from around the world came together at SauceCon 2018 to learn from each other and level up their automated testing and continuous delivery skills.

Developers get more quantum computing goodies

Microsoft's Quantum Development Kit (QDK) got its first major upgrade since its introduction last year. It witnessed the addition of several new features designed to open the platform to a wider array of developers. The updated QDK will be interoperable with the Python computing language.

According to sources at Microsoft, developers have been wanting the kit to be made available for Linux and MacOS. This newly released QDK includes support for Linux and MacOS, as well as additional open source libraries.

The Quantum Development Kit was announced last fall at Microsoft's Ignite conference.

Supporting interoperability for Python allows developers to access their existing libraries from Q# without having to port it, Scott Friedman, a spokesperson for Microsoft, pointed out. "These updates support Microsoft's ambition to enable a scalable Quantum solution for the broadest set of customers – eventually realising our goal of delivering Quantum-as-a-Service on Azure," he added.
